## DETAILED ACTION

### *Drawings*

1. Figure 10 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g).
2. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character "8" has been used to designate both a gear and a motor accommodating section. Correction is required.
3. Applicant is required to submit a proposed drawing correction in reply to this Office action. However, formal correction of the noted defect can be deferred until the application is allowed by the examiner.

### *Specification*

4. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### *Claim Rejections - 35 USC § 112*

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claims 2-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 2834

7. Claims 2-4 recite the following limitation: "the end portion". There is insufficient antecedent basis for this limitation in the claims.

8. Claims 2 and 3 recite the following limitation: "the/said motor drive". There is insufficient antecedent basis for this limitation in the claim.

***Claim Rejections - 35 USC § 102***

9. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

10. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 3,676,725 to Wiser et al.

Wiser et al. clearly teaches the construction of a motor supporting device comprising:

a motor accommodating section (14) for accommodating and holding a motor (10)

therein, and

a gear holding section (42) that rotatably holds a gear (12) for externally transmitting a driving force of said motor,

wherein said motor supporting device further comprises a covering section (18), which is integrally formed with said motor accommodating section and flatly covers said gear holding section,

wherein, as stated in Claim 2, said covering section is bendably formed with respect to said motor accommodating section, and comprises a side pressing section (180 – added by the

Art Unit: 2834

examiner for convenience) that abuts to the end portion of said gear provided to the motor drive shaft (36).

further comprising, as stated in Claim 3, a fitting section (66) for fixing said covering section to said motor accommodating section, with said side-pressing section being abutted to the end portion of said gear mounted to said motor drive shaft, said fitting section being provided to at least either one of said covering section and said motor accommodating section,

further comprising, as stated in Claim 4, a fitting section (181 – added by the examiner for convenience) for coupling the end portion of a support shaft (36) that is formed in said gear holding section for rotatably holding the gear to said covering section, said fitting section being provided to at least either one of said covering section and the end portion of said support shaft.

### Conclusion

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
